

Bathroom drawings, quantities and inspection

Assemble the project drawings, quantities, approval sequence and inspection records, distinguishing a teaching takeoff from purchasing and execution approval.

What you will accomplish

- Unify the coordinated project package
- Separate takeoff from purchasing
- Tie the sequence to inspections and handover

Unify the coordinated project package

Index plans, elevations, sections, interfaces and product/material/quantity schedules. Give items identifiers, sources, revisions and approval statuses, reconciling them across documents. Identify work outside the furniture scope and its owner. Completeness means consistent, actionable inputs rather than a large page count.

Consistent IDs, revisions and ownership make the package usable.

Separate takeoff from purchasing

Exercise only: a rectangular floor measures 2 m by 3 m with no deductions, so $2 \times 3 = 6 \text{ m}^2$. This is a geometric takeoff, not a recommended bathroom size or final order. Purchasing also reviews product layout, cuts, pack sizes and an approved allowance. Link cost to unit rate, source and date; keep net area separate from additions.

6 m² net under the assumption; purchasing is a separate review.

Tie the sequence to inspections and handover

Link confirmed products and specialist coordination to approved stages and required pre-concealment inspections, then close/finish according to the selected system. Do not impose one layer sequence on all products. Assign an owner and acceptance evidence to each hold point, followed by defects, reinspection, as-built information and operation/maintenance records. Keep outstanding items visible at handover.

Required evidence controls release of the next stage.

Worked case and decision

The 6 m² teaching takeoff is entered directly as a purchase order before packs and cutting layout are reviewed. Retain 6 m² as net takeoff and hold the order quantity and cost until product selection, layout and a dated quotation are resolved.

Decision: keep takeoff and order quantity separate.

Check understanding

Exercise floor 2 m × 3 m, no deductions: net area?

- 6 m²
- 5 m²
- 6 m³

Correct: 6 m². Length times width gives 6 m² of area, not volume or an order quantity.

Lesson questions

Does correct area arithmetic release purchasing?

No. Review product, layout, pack sizes, approved allowances and dated quotation.

Practice

Submit a package index, teaching takeoff, purchase inputs and a stage/inspection/handover plan.

Index and revisions

Takeoff/purchasing

Dependencies and handover

Review your work against the criteria. Saving it does not constitute technical project approval.

- 6 m² with correct unit
- Net and allowances separate
- Owner/evidence for hold points
