

A small kitchen project and a larger comparison

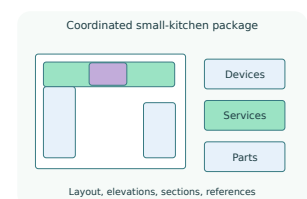

Build a small-kitchen package and compare medium/large cases, identifying reusable details and changes that require renewed review.

What you will accomplish

- Assemble the small-kitchen package
- Compare what changes with scale
- Reconcile quantities and approvals separately

Assemble the small-kitchen package

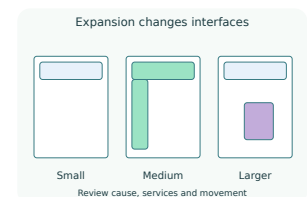

Combine user brief, site survey, layout, elevations, sections, devices, services and hardware. Test openings and reconcile cut lists to drawing revisions. List open issues before release; limited area does not remove access or service needs.

A small project still needs every coordination interface.

Compare what changes with scale

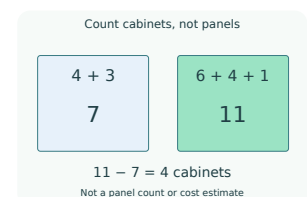

Larger cases may introduce zones, users, appliances or an island. For each difference record its cause, affected elements, drawings/services and owner. Reuse a detail only if its conditions remain valid; floor-area growth does not scale drawer dimensions or fixing capacity.

Compare changed use, not just floor-area ratios.

Reconcile quantities and approvals separately

Quantity exercise: 4 base and 3 wall units total 7. The larger case has $6 + 4 + 1 = 11$ base/wall/tall units, 4 more cabinets. This does not state panel count or cost difference. Each case needs its own part, service and inspection records.

7 and 11 count cabinets, not panels or prices.

Worked case and decision

The larger option adds an island. Updating cabinet counts alone misses changed movement, services and support. Create a difference card instead of copying the small-project approval.

Decision: review changed execution conditions before reusing the package.

Check understanding

How many cabinets are 6 base, 4 wall and 1 tall?

- 11 cabinets
- 10 cabinets
- 4 cabinets

Correct: 11 cabinets. The three counts total 11 cabinets, not panels.

Lesson questions

Can details scale by the room-area ratio?

No. Parts, products, support and services need condition-specific review.

Practice

Submit a small-kitchen package, medium/large difference cards, cabinet counts and reopened review items.

Assemble the small-kitchen package

Compare what changes with scale

Reconcile quantities and approvals separately

Review your work against the criteria. Saving it does not constitute technical project approval.

- Coordinated small-case outputs
- Each difference has a cause
- 7/11 identified as cabinet counts
