

A coordinated dining furniture project

A dining set needs functional and visual coordination across table, chairs and sideboard. Turn those decisions into a traceable drawing, procurement, sample and inspection package.

What you will accomplish

- Connect the pieces through a use scenario
- Link drawings to procurement records
- Translate design intent into acceptance criteria

Connect the pieces through a use scenario

Define everyday meals, guests, serving and clearing away. Assign each piece a role and list the sideboard contents and requirement owner. Check chair arms against the table underside and sideboard doors against pulled-out chairs. A matching finish cannot compensate for an incompatible functional interface.

Review the pieces together in the same use scenario.

Link drawings to procurement records

Assign type codes T for table, C for chair and S for sideboard. Record quantity, approved dimensions, material, finish, drawing/revision reference and missing product information. One table, four chairs and one sideboard means $1 + 4 + 1 = 6$ physical pieces but three types. Do not confuse quantities with type or drawing counts; distinguish any different chair product.

Type and quantity schedule

T	Table	1
C	Chair	4
S	Sideboard	1

$1 + 4 + 1 = 6$
Three types • six pieces

Three types, six physical pieces in the exercise.

Translate design intent into acceptance criteria

Code the finish sample and review it alongside chair materials under relevant project lighting. Acceptance criteria should reference approved dimensions and samples, hardware movement, edge quality and seating/serving interfaces. Each piece needs appropriate performance documentation and review. Record defects, owners, corrective actions and reinspection evidence before closing an item.

Close defects with referenced correction and reinspection evidence.

Worked case and decision

Chair C changes to an armchair while its quantity remains four. Its arm no longer clears the underside of table T. The six-piece quantity is still correct, but the functional package is not. Update the chair reference, review the T/C interface and obtain renewed selection approval.

Decision: a product change reopens its interfaces even when quantity is unchanged.

Check understanding

One table, four chairs and one sideboard: how many types and pieces?

- 3 types and 6 pieces
- 6 types and 3 pieces
- 3 types and 3 pieces

Correct: 3 types and 6 pieces. The chair is one type repeated four times.

Lesson questions

Does matching colour establish a coordinated set?

No. Functional interfaces, materials, details and procurement references must also align.

Practice

Submit a use layout, type/quantity/revision schedule, sample card and one defect/correction record.

Use and interfaces

Procurement/revision schedule

Sample and inspection

Review your work against the criteria. Saving it does not constitute technical project approval.

- Interfaces checked
- 3 types and 6 pieces
- Evidence before defect closure
