

Shared workspaces, meeting areas and handover

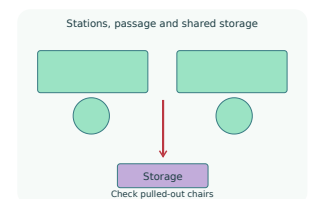

Coordinate shared workstations, meetings, circulation and services, then issue an installation and handover record tied to users and approved references.

What you will accomplish

- Map work modes and adjacency
- Test meetings, setup and changeover
- Create a traceable handover record

Map work modes and adjacency

Record focus, calls, collaboration and shared storage needs by group. Map adjacency and simultaneous chair/circulation states. A partition's appearance does not establish acoustic or privacy performance; route acoustic, access and exit requirements to the relevant review.

Adjacency follows tasks and use states.

Test meetings, setup and changeover

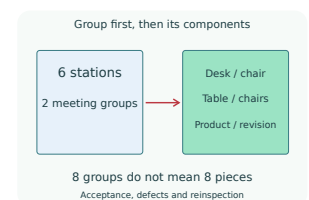

Test the meeting, reconfiguration and maintenance states with participants, display, door and equipment. Review sight lines, tool access and leaving seats. Added chairs require a new layout/movement check, not simply filling the table perimeter.

Meeting and changeover are distinct use states.

Create a traceable handover record

Code workstations, meeting groups and storage against products and drawing revisions. Record quantities, locations, acceptance, defects and available care/warranty information. 6 stations plus 2 meeting groups are 8 functional groups, not 8 furniture pieces; itemize components. Close defects with reinspection evidence and provide relevant user orientation.

Functional groups and physical pieces are different counts.

Worked case and decision

Six stations fit with chairs tucked in, but two pulled-out chairs block shared storage. Revise storage or station positions, retest the state and update the referenced drawing before procurement.

Decision: validate shared use before fixing quantities and locations.

Check understanding

Do 6 workstations and 2 meeting groups mean exactly 8 furniture pieces?

- No; itemize each group's components
- Yes, exactly 8 pieces
- Yes, 6 pieces

Correct: No; itemize each group's components. A functional group may contain several physical items.

Lesson questions

Does a tall partition prove acoustic privacy?

No. Performance needs appropriate evidence and project-specific review, not appearance alone.

Practice

Submit a shared-office layout/use states, group/component schedule, installation plan and defect/reinspection card.

Map work modes and adjacency

Test meetings, setup and changeover

Create a traceable handover record

Review your work against the criteria. Saving it does not constitute technical project approval.

- Shared movement tested
- Groups separated from items
- Referenced handover evidence
